

Scripting Language

Lab Report Submission Date: 2081/08/15 at 9:00 AM

Make a lab report of given questions and topics.

[Note: हरेक प्रश्नहरू ल्यापटपमा गर्ने र आउटपुट सहित हरेक प्रश्नको छेउमा टास्ने तथा डाटाबेसमा नामसहितको इनपुट दिएर आउटपुट प्रिन्ट गर्ने ।

Please compile all the questions stored on the laptop, alongside their respective outputs. Then, display the output adjacent to each question. Finally, provide the printed output by inputting the names from the database.]

Java Script

- 1) Write a program in JavaScript to check whether the given number is odd and even.
- 2) Write a program in JavaScript to print the sum of 20 even numbers.
- 3) Write a program in JavaScript to print series: 0 1 1 2 3 5 8.....up to 15th term.
- 4) Use the pop-up boxes in JavaScript with suitable example.
- 5) Write a program in JavaScript to input 10 subject marks and display the average value of them by using functions.
- 6) How to implement events in JavaScript. Explain any five events with suitable example.
- 7) Write a program in JavaScript to input 10 elements in an array and display the largest and smallest element among them.
- 8) Write a program in JavaScript to print current Date and Time as proper format.
- 9) Use DOM model and Write separate example of each DOM methods.
- 10) Make a form in HTML and generate the client side validation by using JavaScript.
- 11) Write an example for objects in JS like date, time, array etc.
- 12) Create a basic Simple Interest Calculator where users can input values like the principal amount, rate of interest, and time. After clicking the

"Calculate" button, the app will compute and display the Simple Interest (SI) and the total amount through DOM model.

PHP

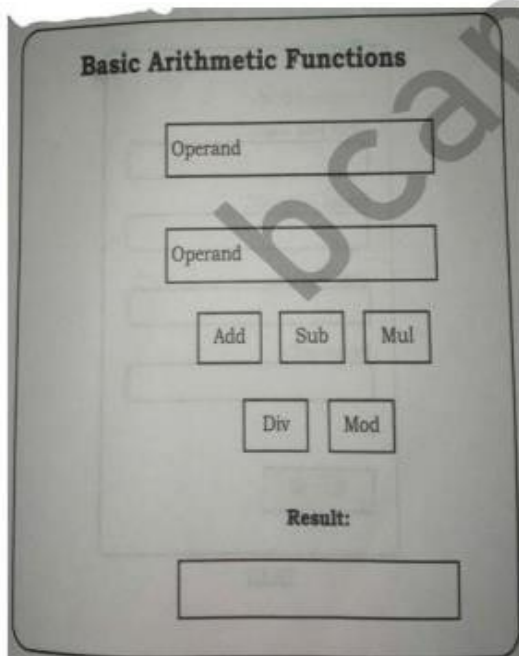

- 14) Write a program in PHP to input a number and check whether the given number is prim or not.
- 15) How to use array in PHP? Write a program for Indexed array, numeric array, Associative Array, Multidimensional array.
- 16) Write a PHP program to create a multidimensional array that holds the marks of three subject like math Nepali and physics of three student Ram,Shyam,Hari. Then display the average marks of each student.
- 17) Write a PHP program to input 30 students marks in a subject and count the pass student's where the pass marks is ≥ 32
- 18) Write a PHP program to input 10 employees salary and display the employee's salary where the salary is ≥ 32000 by using associative array.

- 19) Write a program in PHP to use function with arguments.
- 20) Write a program in PHP to use pass by value and reference.
- 21) Write a program in PHP to find the factorial of given number by using recursion function.
- 22) Write an example for \$_POST, \$_GET Superglobals variables, where you have to create a form with appropriate CSS.
- 23) Create a Cookies and Session in PHP.
- 24) Create a form with appropriate CSS and upload images and files and saved all uploaded files, images in a folder by using server side scripting language.
- 25) Write a program in PHP for following topics.
 - a. Constructor and destructor
 - b. Single Inheritance
 - c. Multi-level Inheritance
 - d. Hierarchical Inheritance
 - e. Method overriding
 - f. Exceptions handling
 - g. Access Static Members
- 26) How to implement Ajax in PHP? Explain with suitable Example.
- 27) Write a program to insert a image and hide, unhide and toggle the inserted image by using jQuery.
- 28)  Design the following form in HTML and write corresponding PHP and SQL code to store the user's values after satisfying the following validation rules.
 - a) Length of full name up to 40 characters.
 - b) Email address must be a valid email address.
 - c) Username must start with string followed by a number.
 - d) Password length must be more than eight characters.*Assume your own database and database connectivity constraints if necessary.*

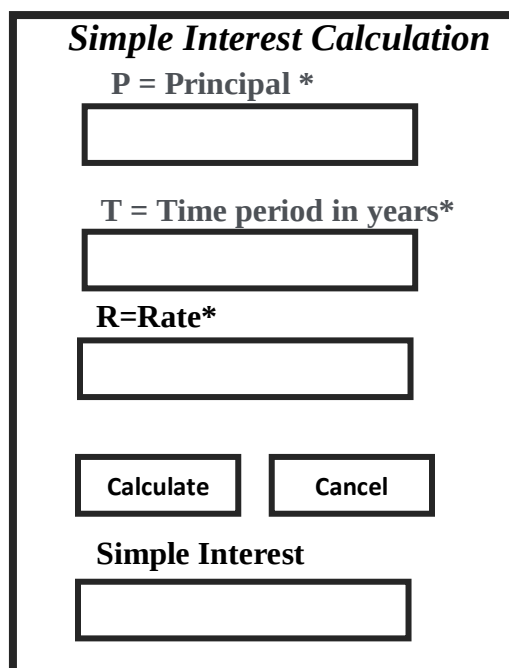

29)

Design the following form in HTML and display the value in the result box after calculating basic arithmetic operations based on user input with the use of JavaScript.

A form titled "Basic Arithmetic Functions" with two input fields labeled "Operand", five buttons labeled "Add", "Sub", "Mul", "Div", and "Mod", and a "Result:" label above a final output box.

30) Display the following form in HTML and apply the appropriate CSS. Display the value in the result box after calculating basic arithmetic operations based on user input with the use of JavaScript

A form titled "Simple Interest Calculation" with three input fields labeled "P = Principal *", "T = Time period in years*", and "R=Rate*", two buttons labeled "Calculate" and "Cancel", and a "Simple Interest" label above a final output box.

31. Make a suitable project by using client side and server side scripting languages with database connection.

****The End****

Set 'B'

1. Make a form in HTML, where show the fields (Customer Id, Customer Name, Email Address, and Password) and generate the client side validation for each field by using client side scripting language.
2. Once the user is authenticated, set session variable to store user information such as username and user ID.
3. Design the following form in HTML and write corresponding PHP and SQL code to store the user values after satisfying the following validation.
 - a. *Length of mobile number must be 10 elements.*
 - b. *Email address must be an email format*
 - c. *User name must be started with string followed by a number*
 - d. *Password must be strong and more than eight characters*

[Note: You can use your own database and table name]

NIC ASIA MoBank System

Mobile Number*

Email Address*

User Name*

Password*
